## Filosofia | Philosophy | Philosophie

MLE nasce più di 30 anni fa a Parigi. Guardando indietro si può facilmente capire che la chiave di questo successo di marchio è il metodo di lavoro e la forte specializzazione. La stretta collaborazione con gli Interior Designers specializzati in alberghi di lusso ha permesso di capire quali erano le esigenze dei nostri comuni clienti e la nostra cultura illuminotecnica ci ha permesso di rispondere a questi bisogni con prodotti innovativi, funzionali e soprattutto di gran gusto. Un paio di esempi.

Nel 1986, quando la tecnologia delle lampadine mette a disposizione le lampade alogene miniaturizzate a bassa potenza, MLE ha sviluppato la prima lampada da lettura con braccio orientabile. Il nuovo apparecchio fa luce e può essere orientato senza scottarsi. In casa MLE nasce quindi un nuovo concetto d'illuminazione che viene poi successivamente sviluppato con l'introduzione dei LED da L.Bellini (Opera, 2003).

Nel 1988 viene lanciata Carlton, con PY Rochon. La prima lampada da bagno con grado di protezione dall'acqua IP44. Solo successivamente i legislatori europei si accorgono che nelle zone umide è necessario proteggere il cliente dell'albergo e quindi emanano regolamenti in materia.

La specializzazione di MLE è una specializzazione di mercato. Specializzarsi in un mercato significa focalizzarsi sui bisogni di un certo tipo di clienti e sforzarsi di rispondere con propria cultura aziendale. Per capire a fondo le varie sfaccettature del mercato dell'hotellerie MLE dialoga e collabora con gli Interior Designer specializzati, con le catene alberghiere, con gli Investitori e con gli Operatori. Ciascuna di queste figure infatti è coinvolta nel progetto e nella gestione di un albergo ed ha le proprie necessità che MLE sintetizza nella propria collezione.

MLE was born in Paris more than 30 years ago. Looking back one can easily understand that the key to the success of the brand is the working method and the strong specialization. Working closely with luxury hotel Interior Designers has allowed us to understand which were the needs of our common customers. Our culture of lighting allowed us to respond to these needs with innovative, functional and, above all, beautiful products. A couple of examples.

In 1986, when the lamp technology provides us with the miniaturized low-power halogen lamps, MLE develops the first reading lamp with adjustable arm. The new device makes light and can be oriented without burning. MLE arises then a new concept of illumination which is then subsequently developed with the introduction of the LEDs together with L.Bellini (Opera, 2003).

In 1988 MLE launched Carlton, with PY Rochon. The first bathroom lamp with degree of protection from water IP44. Only later the European legislators did realize that in wet areas is necessary to protect the client of the hotel and then enact regulations.

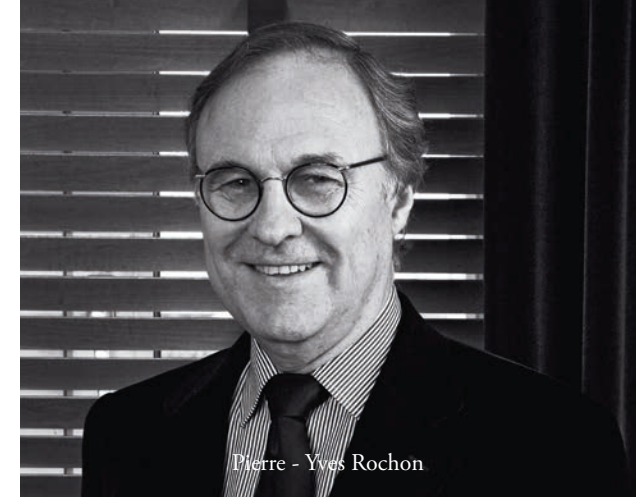

The specialization of the MLE is a market specialization. Market specialization means to focus on the needs of all the actors involved in the project and in the management of the hotel. The answers to these needs have to be included into the product range thanks to a well based Company Culture.

MLE est né à Paris il ya plus de 30 ans. En regardant en arrière, on peut facilement comprendre que la clé de la réussite de la marque est la méthode de travail et la forte spécialisation. Travaillant en étroite collaboration avec les Architectes d'Intérieur d'hôtels de luxe cela nous a permis de comprendre quels étaient les besoins réels de nos clients communs. Notre culture de l'éclairage nous a aidé à répondre à leurs besoins avec une certaine innovation, fonctionnalité et surtout avec de beaux produits. Quelques exemples.

En 1986, lorsque la technologie des sources nous fournit les lampes halogènes de faible puissance miniaturisés, MLE a développé la première lampe de lecture avec un bras réglable. Le nouveau dispositif génère la lumière nécessaire et peut être orientée sans brûler. MLE se lance alors dans un innovant concept d'éclairage qui sera ensuite développée avec l'introduction des LED avec L.Bellini (Opera, 2003).

En 1988, MLE lance la Carlton, avec P.Y. Rochon. La première lampe pour la salle de bain avec un degré de protection contre l'eau IP44. Ce n'est que plus tard que les normes européennes imposent l'IP44 dans les zones humides car nécessaire pour protéger les clients des hôtels.

La spécialisation de MLE est de s'adapter au marché. Cela signifie se concentrer sur les besoins de tous les acteurs impliqués dans le projet et dans la gestion de l'hôtel. Ces critères doivent être inclus dans la production et la mise au point permanente de la gamme de produits grâce à une forte culture de l'entreprise.

## *Il made in Tuscany | Made in Tuscany | Fabriqué en Toscane*

Pur essendo un'azienda internazionale, MLE è radicata fortemente sul territorio fiorentino e toscano. La Toscana è una terra con una forte cultura del prodotto di qualità e della manifattura e da sempre esprime eccellenze in molti i settori legati al lusso, all'arte e all'artigianato. Durante la sua attività MLE ha potuto selezionare i migliori fornitori delle diverse fasi di lavorazione che il prodotto attraversa e il 90% di questi sono in Toscana. Oggi più che mai MLE è impegnata a trasferire queste eccellenze toscane nella propria collezione.

Despite being an international company, MLE is strongly rooted in the territory of Florence and in Tuscany. Tuscany is a land with a strong culture of high quality product and with many manufacturing excellences which, since centuries, express themselves in many areas related to luxury, art and crafts. During its activity MLE selected the best suppliers of the various processing stages that the product crosses. 90% of these are in Tuscany. Today more than ever MLE is committed to transfer these Tuscan excellences in its collection.

En dépit d'être une entreprise internationale, MLE est fortement ancrée dans le territoire de Florence et en Toscane. La Toscane est une terre avec une forte culture de produits de haute qualité avec une excellence de fabrication qui, depuis des siècles, s'exprime dans de nombreux domaines liés au luxe, à l'art et à l'artisanat. Au cours de son activité MLE a fait appel aux meilleurs fournisseurs pour les différentes étapes de traitement que le produit traverse. 90% d'entre eux sont en Toscane. Aujourd'hui plus que jamais MLE s'engage à transférer cette excellence toscane dans sa collection.

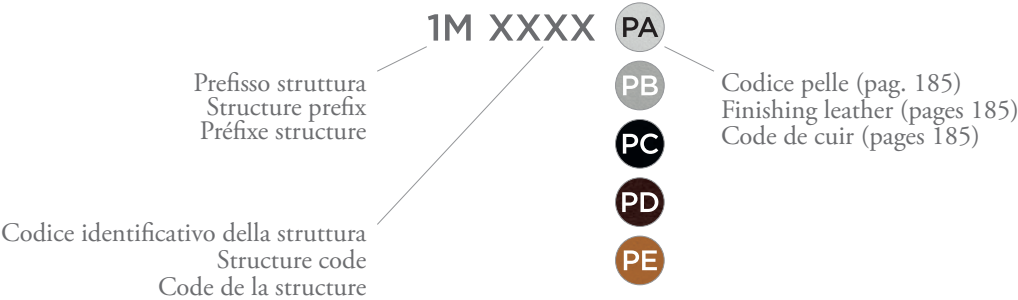

## *Pelle | Leather | Cuir*

Nascono nella seconda metà del 1800 le prime imprese del distretto toscano della pelletteria. Uno dei pionieri era Guccio Gucci che negli anni Venti decide di aprire un laboratorio specializzato nella pelletteria, articoli da viaggio e da selleria, insieme a un negozio a Firenze. Le lavorazioni si mantengono su scala prettamente artigianale. Si eseguono all'interno dei laboratori tutte le fasi del processo produttivo, realizzando un prodotto di qualità. L'artigiano lavora su ordinazione, progettando e realizzando prodotti "su misura", personalizzati. Vengono acquisite importanti competenze nel trattamento di materiali particolari, come le pelli di coccodrillo e di lucertola. Grazie a queste radici Firenze e la Toscana oggi sono al primo posto nel mondo per la produzione di pelletteria di lusso e di qualità. Da quest'anno MLE intende innestare questo immenso patrimonio di conoscenza all'interno dei propri prodotti, inserendo la pelle come nuova finitura su prodotti storici e realizzando nuovi prodotti che ne esaltino il valore.

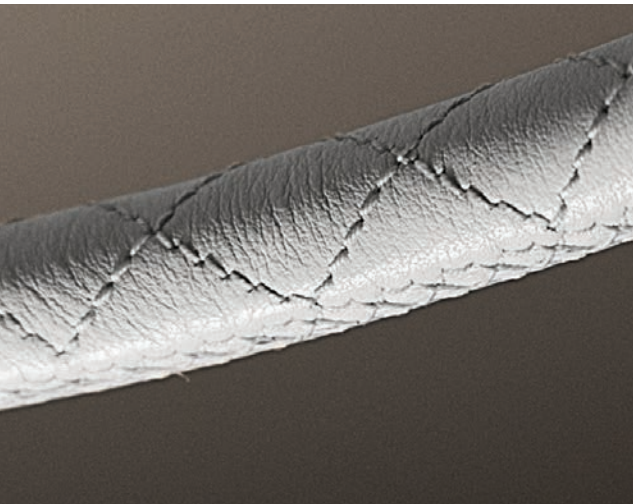

The first companies of the Tuscan district of leather were born in the second half of 1800. One of the pioneers was Guccio Gucci who, in the Twenties, decides to open a laboratory specialized in leather goods, luggage and saddlery, along with a shop in Florence. The operations remain purely on artisanal scale. All the stages of the production process are performed within the laboratories, providing a quality product. The craftsman works "on order", designing and manufacturing customized products. The skills start to grow, especially in the treatment of particular materials, such as crocodile hides and lizard. Thanks to these roots Florence and Tuscany are now in first place in the world for the production of luxury and high quality leather goods. From this year MLE introduces this immense wealth of knowledge in its products, entering the skin as a new finish on historical products and creating new products to enhance their value.

Les premières entreprises Toscane de cuir sont nées dans la seconde moitié de 1800. Un des pionniers était Guccio Gucci qui, dans les années 20', décide d'ouvrir un laboratoire spécialisé dans la maroquinerie, bagages et sellerie, avec un magasin dans Florence. Les opérations restent purement à l'échelle artisanale. Toutes les étapes du processus de production sont effectuées dans les laboratoires, en fournissant un produit de qualité. Les artisans travaillent sur commande, ils conçoivent et fabriquent des produits personnalisés. Les compétences se développent, en particulier dans le traitement des peaux de crocodile et de lézard. Grâce à ce savoir faire, Florence et la Toscane sont aujourd'hui les leaders au monde pour la production de la maroquinerie de luxe. Cette année, MLE a décidé d'intégrer ce patrimoine de connaissances dans la fabrication de ses propres produits, en intégrant des finitions en cuir dans certains de ses modèles historiques et également dans de nouvelles collections.

COME ORDINARE LA PELLE CHE DESIDERI  
HOW TO ORDER THE LEATHER YOU WANT  
COMMENT COMMANDER LA CUIR QUE VOUS VOULEZ

Se il prodotto ha parti in pelle, aggiungere il prefisso delle finiture in pelle (pag. 185)  
If the product has some leather parts, add the leather code (page 185)  
Si le produit a des pièces en cuir, d'ajouter le code de cuir (page 185)

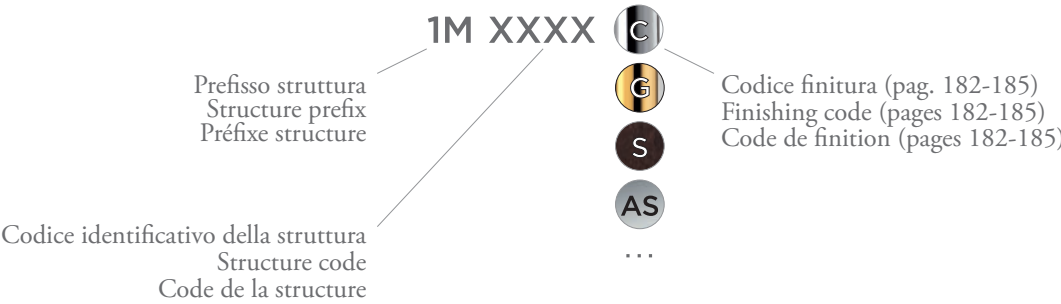

*Legni e Metalli | Woods and Finishes | Bois et Finitions*

Anche i legni e le finiture dei metalli sono oggetto di personalizzazione. Sono 5 essenze disponibili e 21 i trattamenti dei metalli, alcuni di essi frutto della ricerca e sviluppo MLE in questo specifico settore. Accanto alle finiture galvaniche più comuni come il cromo e l'oro, MLE offre finiture con lavorazioni a mano come l'argento e l'oro anticato. La finitura brunito, che ricorda il ferro battuto, è stata sviluppata attraverso un trattamento di verniciatura sviluppato all'interno dell'azienda. Grazie a questo trattamento è possibile ottenere questa finitura anche su materiali diversi dall'ottone. Con questo catalogo entrano a far parte della collezione due nuove finiture rame: il satinato e l'anticato.

Even the wood and metal finishes are subject to customization. Are available up to 5 types of wood and 21 treatments of metals. Some of them are the result of MLE R&D in this specific field. Besides the most common galvanic finishes such as chrome and gold finishes MLE offers handmade processes such as antique silver and antique gold. The burnished brass finish it's very near the wrought iron and has been achieved through a paint treatment developed within the company. With this treatment you can get this finish even on materials other than the brass. With this catalogue two new copper finishes become part of the collection: the brushed and the antique.

Le bois et le métal permettent aussi la personnalisation. 5 tonalités différentes de bois et 21 traitements de métaux. Certains d'entre eux sont le résultat de recherche et développement de MLE dans ce domaine très spécifique. Outre les finitions galvanisées les plus courantes le chrome et l'or, MLE offre des procédés artisanaux tel que le patine antiquaire argent et patine antiquaire or. La finition en laiton bruni, est très près du fer forgé et a été obtenu grâce à un traitement de peinture développé au sein de l'entreprise. Avec cette spécialisation, vous pouvez obtenir cette finition même sur des matériaux autres que le laiton. Avec ce catalogue devenue partie de la collection deux nouvelles finition cuivre: le brossé et l'antiquaire.

Si le produit a des pièces en bois, d'ajouter le code de bois (page 182-185)

PERSONALIZZAZIONE | CUSTOMIZING | PERSONNALISATION

## Tessuti | Fabrics | Tissus

La continua collaborazione con Interior Designer e l’interesse verso modelli esclusivi che diventino parte integrante della decorazione dell’hotel, ha spinto MLE a creare uno specifico atelier dedicato alla realizzazione di articoli “su misura”. Qui la cura del dettaglio è spinta ai massimi livelli.

Oggi MLE si presenta ai suoi Clienti con circa 50 rivestimenti per paralumi: dal classico chinette, alla seta, all’organza, all’ecopelle ed a materiali innovativi in tantissimi colori diversi. Le forme dei paralumi sono oggi diventati una variabile tanto che alcune delle novità di questo catalogo sono state disegnate in modo da svincolare il disegno del paralume dalla sorgente luminosa. Se poi queste opzioni non bastassero, già da tempo MLE è organizzata per rivestire i paralumi con i tessuti scelti dal progettista.

The continuous collaboration with interior designers and interest in exclusive designs that become an integral part of the decoration of the hotel, drove MLE to create a specific workshop dedicated to the creation of articles “made to measure”. Here, the attention to detail is pushed to the highest levels.

Today MLE introduces its Clients 50 fabrics for lampshades from classic chinette, to silk, to organdie, to ecological and innovative materials in many different colors. The shapes of lampshades have today become a variable so that some of the novelties of this catalog have been conceived to release the design of the shade from the light source. And if these options are not enough, since some time MLE is organized to cover lampshades with fabrics chosen by the Designer.

La collaboration continue avec les Architectes d’intérieur et leurs intérêts dans des modèles exclusifs qui deviennent une partie intégrante de la décoration de l’hôtel, a conduit MLE à créer un atelier spécifique dédié à la création d’articles “sur mesure”. Ici, le soucis du détail est poussé au plus haut niveau.

Aujourd’hui MLE se présente à ses clients avec 50 tissus pour abat-jour de la Chinette classique, à la soie, à l’organdi, des matériaux écologiques et innovants dans de nombreuses couleurs. Les formes des abat-jour sont devenus une variante de sorte que certaines des nouveautés de ce catalogue ne sont conçus que pour libérer la conception du diffuseur de la source lumineuse. Et si ces options n’étaient pas suffisantes, depuis quelque temps MLE s’est organisé pour recouvrir les abat-jour avec des tissus choisis par le Concepteur.

Hotel Phoenix – Copenhagen, Denmark

## *Su misura | Custom made | Fait sur commande*

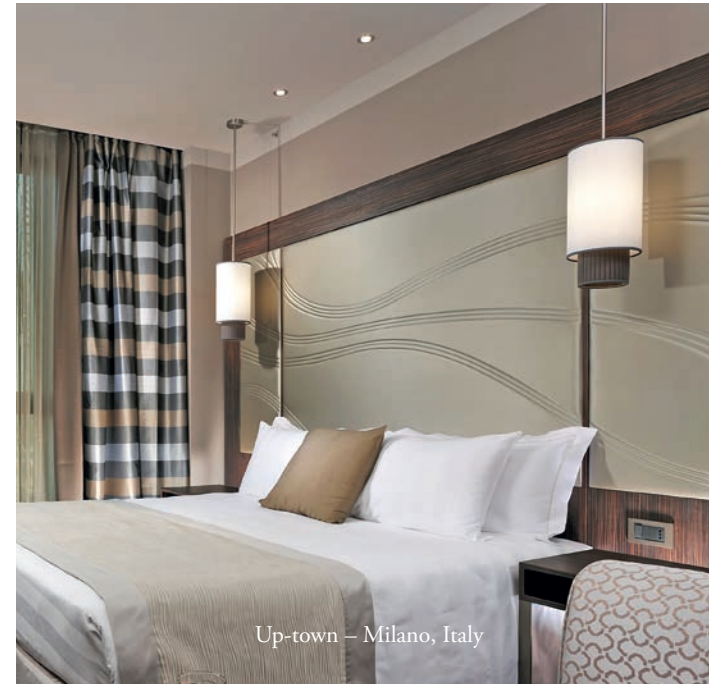

Quando è necessario MLE si spinge oltre il proprio catalogo e sviluppa nuovi prodotti su disegno del Progettista. Pezzi unici per le zone pubbliche o piccole serie per le camere, le suite o i corridoi. Dallo schizzo del Progettista, MLE ingegnerizza e sviluppa il prodotto inserendo le giuste sorgenti luminose e considerando le normative tecniche e di sicurezza del paese dove sarà effettuata l'installazione. MLE è quindi in grado di proporsi come unico fornitore per l'illuminazione interna dell'albergo garantendo la qualità, la puntualità e la stessa cura del dettaglio della sua gamma standard.

When it's needed, MLE goes beyond its catalog and develops new products according to customer design. Unique pieces for public areas or small series for the rooms, suites and corridors. Starting from the sketch of the Designer, MLE engineers and develops the product by including the correct light sources and considering the technical and safety regulations of the country where the installation will be carried out. MLE is then able to act as the sole supplier for the interior lighting of the hotel by ensuring the quality, timeliness and the same attention to detail of its standard range.

Lorsque cela est nécessaire, MLE va au-delà de son catalogue et développe de nouveaux produits selon la conception de l'Architecte. Des pièces uniques pour les espaces publics ou de petites séries pour les chambres, les suites et les couloirs. A partir du dessin du Designer, MLE développe le produit avec les bonnes sources et compte tenu du règlement technique et de sécurité du pays où l'installation sera effectuée. MLE est alors en mesure d'agir comme fournisseur exclusif pour l'éclairage intérieur de l'hôtel en assurant la qualité, la rapidité et la même attention aux détails que pour sa gamme standard.

# Normative europee per l'illuminazione dei bagni | European regulations for bathroom lighting | Réglementation européenne pour l'illumination de la salle de bains

La normativa europea che considera le aree bagno divide lo spazio all'interno del bagno in 3 zone:

**Zona 1:** Gli apparecchi in questa zona devono essere a prova di spruzzo, quindi in questa zona è necessario un numero IP di 45 o maggiore. Questa zona è la più pericolosa perché l'utente è nell'acqua. MLE suggerisce IP67 per i prodotti per i box doccia.

**Zona 2:** In questa zona, che è l'area in prossimità della zona 1 e la zona entro 60 cm. dalla sorgente di un getto d'acqua, gli apparecchi d'illuminazione devono essere almeno IP44. Questa zona comprende la zona del lavabo e comprende quindi lampade per specchi, specchiere luminose e specchi ingrandenti.

**Zona 3:** Questa zona è lo spazio residuo del bagno e non è data una prescrizione sul grado di protezione. MLE suggerisce comunque l'uso di prodotti classificati IP44 e in classe III, con l'alimentatore protetto nel controsoffitto o in una scatola a parete.

Ogni circuito del bagno dovrebbe avere una protezione salvavita da 30mA di tipo magnetotermico.

Tutti i prodotti MLE per le aree bagno offrono un grado di protezione IP44 comprese le specchiere luminose e gli specchi ingrandenti. Quando valuti la specifica di un prodotto per un bagno devi considerare che la protezione IP deve essere assicurata costantemente durante tutta la vita del prodotto. Quindi, un prodotto per il bagno deve garantire le sue caratteristiche anche dopo la manutenzione e con diversi livelli di temperature e umidità. MLE utilizza guarnizioni di alta qualità e componenti a prova di acqua certificati per la tutta la gamma per il bagno.

The European regulation that considers the bathroom areas divides the space inside the bathroom in 3 zones:

**Zone 1:** Light fitting in this zone must be spray-proof, therefore in this area it is required an IP number of 45 or higher. This zone is the most dangerous as the user is in the water. MLE suggests IP67 products for showers cubicle.

**Zone 2:** In this area, which is the area in proximity of the Zone 1 and the area within 60 cm. from the source of a water jet, the light fittings must be at least IP44. This area includes the area of the wash basin and therefore includes, wall sconces for mirrors, lighting mirrors and enlarging mirrors.

**Zone 3:** This area is the residual space of the bathroom and no prescription on IP rate is given. MLE suggests anyway the use of products rated IP44 and in class III, with the power supply protected in the false ceiling or in a IP rated wall box.

Each circuit of the bathroom should have a protection by 30mA Residual Current Device (RCD).

All the MLE products for bathroom areas offer a protection degree of IP44 including lighting mirrors and enlarging mirrors. When evaluating the specification of a light product for a bathroom consider that the IP rating have to be assured constantly during the lifetime of the product. So a product for bathroom must guarantee its characteristics also after maintenance and with different temperatures and humidity degrees. MLE uses high quality gaskets and certified water-proof components for its bathroom range.

La réglementation européenne qui considère les salles de bains divise l'espace à l'intérieur de la salle de bain en 3 zones:

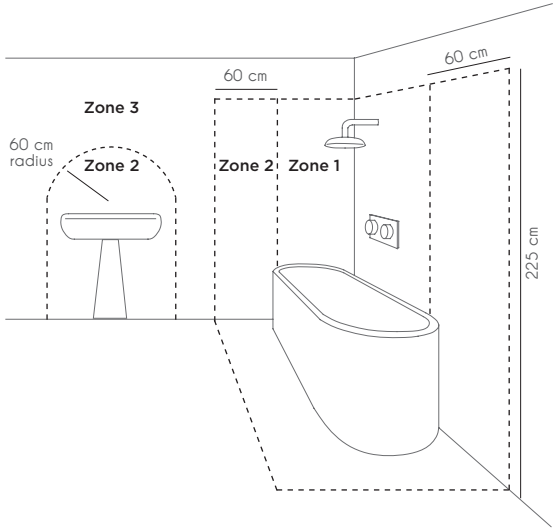

**Zone 1:** Le luminaire dans cette zone doit être à la projections d'eau, donc dans ce domaine il faut un numéro IP de 45 ou plus. Cette zone est la plus dangereuse car l'utilisateur est dans l'eau. MLE propose des produits IP67 pour cabines de douche.

**Zone 2:** Dans cette zone, qui est la zone à proximité de la Zone 1 et la zone dans les 60 cm. de la source d'un jet d'eau, les luminaires doivent être au moins IP44. Cette zone comprend la zone du lavabo et comprend donc, appliques murales pour miroirs, miroirs éclairant et des miroirs grossissant.

**Zone 3:** Cette zone est l'espace residual de la salle de bain et pas de prescription sur IP est donné. MLE suggère de toute façon l'utilisation de produits classés IP44 et dans la classe III, avec l'alimentation protégée dans le faux plafond ou dans une boîte murale.

Chaque circuit de la salle de bain doit avoir une protection par 30mA Dispositif à courant résiduel (RCD).

Tous les produits MLE pour salles de bains offrent un degré de protection de IP44 y compris des miroirs éclairant et des miroirs agrandissants. Lorsqu'on évalue la spécification d'un produit pour une salle de bain, considérer que l'IP doit être assurée constamment pendant la durée de vie du produit. Ainsi, un produit pour salle de bain doit garantir ses caractéristiques aussi après la maintenance et avec différents temperature et humidité. MLE utilise des joints d'étanchéité de haute qualité et des composants certifiés étanches à l'eau pour sa gamme de salles de bain.

## Specchiere a filo muro (FM)

Per venire incontro alle necessità degli interior designers abbiamo sviluppato questo nuovo concetto di specchiera luminosa già sperimentato in alcuni importanti progetti. Le caratteristiche principali di queste specchiere sono:

- lo spessore ridotto coniugato con un comfort visivo ottimale,
- l'assenza di cornici di finitura a vista,
- la facilità d'installazione e manutenzione,
- l'illuminamento uniforme delle aree satinato,
- la protezione dall'acqua e dall'umidità.

Per l'installazione è sufficiente predisporre un vano delle dimensioni dello specchio e di profondità 26mm. Lo specchio è sostenuto da un adeguato numero di magneti e viene movimentato con le ventose. L'alimentazione è remota e può essere alloggiata in un vano a muro, in un mobile o nel controsoffitto fino a una distanza massima di 5 metri.

Anche su questi specchi è possibile installare il sistema anti-appannamento. Questa tecnologia è già disponibile su alcuni nostri modelli ma può essere estesa a tutti e realizzata 'su misura'.

## Mirrors flush with the wall (FM)

To meet the needs of interior designers, we have developed this new concept of lighting mirror already experienced in some important projects. The main features of these mirrors are:

- the reduced thickness conjugated optimum visual comfort,
- the absence of finishing frames at sight,
- easy installation and maintenance,
- the uniform illumination of the satin areas,
- the protection from water and humidity.

To install the flush mirror is sufficient to prepare a space the size of the mirror with depth 26mm. The mirror is supported by an appropriate number of magnets and is moved with the suction cups. The power supply is remote and can be housed in a wall box, in a cabinet or in the false ceiling up to a maximum distance of 5 meters. Also on these mirrors you can install the anti-mist system.

This technology is available already on some models but can be applied to all of them and also 'custom made'.

## Miroir encastré (FM)

Pour répondre aux besoins des designers et architectes d'intérieur, nous avons développé ce nouveau concept de miroirs éclairants déjà utilisé dans certains projets importants. Les principales caractéristiques de ces miroirs sont:

- L'épaisseur réduite ainsi qu'un confort visuel optimal,
- L'absence de cadres de finition,
- L'intégration et un entretien facile,
- L'éclairage uniforme des parties dépolies (lumineuses),
- La protection contre l'eau et l'humidité (IP).

Pour installer ce miroir encastré, il suffit d'une niche de la taille du miroir et une profondeur de 26mm. Il est maintenu par un nombre approprié d'aimants et se place grâce à des ventouses sur son boîtier. L'alimentation électrique fournie est déportée et peut être placée dans une armoire ou dans le faux plafond jusqu'à une distance maximale de 5 mètres. Vous pouvez également installer un système anti-buée en option.

Cette technologie est déjà disponible sur certains modèles et peut aussi bien s'adapter à nos autres miroirs qu'avec une solution 'sur mesure'.
